

Sani-Care

CRYSTAL

大理石晶硬粉

Marble Crystallization Powder

This is the "special chemical agent" applied in Crystallization that restores the marble to its original luster. It leaves no chemical residue that requires stripping and there is nothing left on the surface of the marble to yellow or peel. The process also hardens marble surface and make it scuff and stains resistant.

- Time saving!
- Minimize maintenance cost!
- Easy to use!

Use Instruction

Clean stone floor thoroughly. Use buffering machine (60kg, 120to400 rpm) with hard pad to polish. Dosage: 30-60grams per sq.m. Suggest area coverage should be within 2 sq.m each time. Flush and remove residue then rinse thoroughly.

Packing:
1 Kg/Bot

Product Code: AQ4-031
Appearance: Light yellow powder
